The goals and purposes of this breed standard include:
to furnish guidelines for breeders who wish to maintain
the quality of their breed and to improve it; to advance
this breed to a state of similarity throughout the world;
and to act as a guide for judges.

Breeders and judges have the responsibility to avoid
any conditions or exaggerations that are detrimental to
the health, welfare, essence and soundness of this
breed, and must take the responsibility to see that
these are not perpetuated.

Any departure from the following should be
considered a fault, and the seriousness with which the
fault should be regarded should be in exact proportion
to its degree and its effect upon the health and welfare
of the dog and on the dog’s ability to perform its
traditional work.

The Mountain Feist should be evaluated as a
working dog, and exaggerations or faults should be
penalized in proportion to how much they interfere
with the dog’s ability to work. Honorable scars resulting
from field work are not to be penalized.

HISTORY
The word “feist” is an ancient one referring to a small,
often noisy dog. Like the Cur breeds, the Feist breeds
were developed in the rural South by breeders who
needed low-maintenance dogs to hunt small game and
to eliminate vermin, Feist were often the result of
crosses between hunting hounds and terriers. Today’s
Mountain Feist is the result of generations of breeding
for performance and is still primarily used to hunt
squirrel, although they are also used to hunt raccoon,
rabbits and more.

The Mountain Feist was recognized by the United
Kennel Club on February 1, 2015.

GENERAL APPEARANCE
The Mountain Feist is an agile, active, small tree dog.
The body is slightly longer than tall. Regardless of the
size of the individual dog, the legs must be long enough
to allow the dog to move quickly and with agility in
rough terrain. The head is blocky, with a broad skull, a
moderate stop, and a strong muzzle. The tail is straight,
set on as a natural extension of the topline, and may be
natural or docked. The coat is short and smooth.
Disqualification: Unilateral or bilateral cryptorchid.

CHARACTERISTICS
Mountain Feist hunt using sight, sound and scent, and
are extremely alert dogs. On track, they are virtually
silent.
Disqualification: Viciousness or extreme shyness.

HEAD
The head is proportionate to the size of the body. When
viewed from the side, the muzzle is slightly shorter than
the skull and joined by a definite stop. The planes of the
skull and muzzle are parallel.
SKULL - The skull is flat and broad, tapering slightly
toward the muzzle. Cheeks are muscular, but not over-
developed.
MUZZLE - The muzzle is long and sufficiently broad and
depth to balance the skull. Lips are tight. Lip pigment
matches nose pigment and eye rims.
TEETH - The Mountain Feist has a complete set of
strong, white, evenly-spaced teeth meeting in a scissors
bite.

NOSE - The nose is black or self-colored.

EYES – Eyes are brown, ranging from dark to amber. Eye rims match nose pigment.

EARS - Ears are v-shaped, set at the outside edges of the skull. Ears must be erect. Note: Ear carriage may not stabilize until a dog is mature; therefore, dogs under one year of age should not be penalized for variations in ear carriage.

Disqualification: Cropped ears. Ears not erect.

NECK
The neck is clean, muscular, and of moderate length. The neck gradually widens from the nape and blends smoothly into the shoulders.

FOREQUARTERS
Shoulders are well laid back. The upper arm is long and forms an apparent 90-degree angle with the shoulder blade. The forelegs are strong, straight, and moderately well boned. The elbows are set close to the body, but able to move freely in action. The pasterns are short, powerful, slightly sloping, and flexible.

BODY
A properly proportioned Mountain Feist is slightly longer than tall. Chest is moderately wide and deep, with the brisket reaching to the elbow. Ribs are well sprung and extend well back. Back is of moderate length, and level, blending into a muscular, slightly arched loin with slight to moderate tuck-up.

HINDQUARTERS
The hindquarters are strong and muscular. The bone, angulation, and musculature of the hindquarters are in balance with the forequarters. The stifles are well bent, and the hocks are well let down. When the dog is standing, the short, strong rear pasterns are perpendicular to the ground, and viewed from the rear, parallel to one another.

FEET
The feet are small, compact and slightly oval in shape. The two middle toes are slightly longer than the other toes. Toes are well-arched. Front dewclaws may be removed. Removal of rear dewclaws preferred, but not mandatory.

TAIL
The tail is set on at the end of the croup. Docked or natural tails are acceptable. Docking should be between the second and third joint of the tail.

The natural tail is thick at the base and tapers toward the tip. When the dog is alert, the tail is carried in an upward curve. When relaxed, the tail may be carried straight out behind the dog.

COAT
The coat is short, dense, and smooth, with a hair length of approximately one inch or less.

Disqualifications: Semi-wire, wire or long coats over more than 50 percent of the body.

COLOR
Mountain Feists may be any color or combination of colors.

Disqualification: Albinism.

HEIGHT AND WEIGHT
Height, measured at the withers, must not be less than 12 inches nor greater than 18 inches.

Ideal working weight should not be under 12 pounds nor over 30 pounds, and is dependent on the dog's height.

The Mountain Feist should always be presented in hard, working condition. Dogs outside the approved height range shall be penalized only to the degree that their size affects their ability to work.

Eliminating Faults: Dogs under 12 inches or over 18 inches.

GAIT
Gait is smooth and effortless, with good reach of forequarters. Rear quarters have strong driving power, with hocks fully extending. Viewed from any position, legs turn neither in nor out, nor do feet cross or interfere with each other. As speed increases, feet tend to converge toward centerline of balance. This breed is capable of great bursts of speed when needed.
ELIMINATING FAULTS
(An Eliminating Fault is a Fault serious enough that it eliminates the dog from obtaining any awards in a bench show/conformation event.)
Dogs under 12 inches or over 18 inches.

DISQUALIFICATIONS
(A dog with a Disqualification must not be considered for placement in a conformation event, and must be reported to UKC.)
Unilateral or bilateral cryptorchid.
Viciousness or extreme shyness.
Albinism.
Undershot bite. Overshot bite.
Cropped ears.
Ears not erect.
Semi-wire, wire or long coats over more than 50 percent of the body.

The docking of tails in America is legal and remains a personal choice.
